The film stars Halle Bailey as Ariel, Daveed Diggs as the voice of Sebastian, Jacob Tremblay as the voice of Flounder, Awkwafina as the voice of Scuttle, Jonah Hauer-King as Prince Eric, Art Malik as Sir Grimsby, Noma Dumezweni as Queen Selina, Javier Bardem as King Triton, and Melissa McCarthy as Ursula. The Little Mermaid is the beloved story of Ariel, a beautiful and spirited young mermaid with a thirst for adventure. The youngest of King Triton's daughters, and the most defiant, Ariel longs to find out more about the world beyond the sea, and while visiting the surface, falls for the dashing Prince Eric. While mermaids are forbidden to interact with humans, Ariel must follow her heart. She makes a deal with the evil sea witch, Ursula, which gives her a chance to experience life on land, but ultimately places her life - and her father's crown - in jeopardy. The Little Mermaid, directed by Rob Marshall, opens in theaters nationwide on May 26, 2023. Rome: Total War has a specific cheat 'console' built into it. It allows you to put cheats into the game. The console can be accessed by the pressing the ~ / symbol on the top left position of your key board. Cheat Codes Here is a list of cheat codes*. This list can be updated if some are left out. gamestop or bestbuy - 10% cheaper units in campaign mode oliphant - 40% bigger elephants in campaign mode jericho - Walls fall down in siege in battle map mode add_money xxx - Gives you xxx amount of money. Maximum amount added is 40,000 add_population - Add population to indicated city auto_win - Attacker or defender automatically wins next auto resolved battle. create_unit - Creates a unit in the selected settlement or characters army with the stats you input. To find the Unit ID's, go to your data folder in the Rome - Total War folder. Look for a file named export_descr_unit. In it, you will find a list of every unit in the game. The unit ID is the name next to "Type". Certain units have different ID's than in the actual game; for example the Roman Principes are labelled in the file as "roman principes".
